All-In-One Remote

With one IR+RF Wifi remote, turn your smart phone into a universal remote, controlling several IR/RF devices at once.

1. Product Presentation:

LED Indicator

Micro USB Input

Front Side

Reset Button

Back Side

Note: When in use, place it on a level surface with the reset button facing down.

2. Product Specification

Size: 63*63*23mm

Micro USB input: DC 5V/1A

LED Indicator: Blue color

Infrared Frequency: 38kHz Infrared

Range: ≤ 10 Meters

Wi-Fi Protocol: 2.4GHz

(not support 5G network)

Wi-Fi Standard: IEEE 802.11 b/g/nRadio

RF Frequency: 433MHz/315MHz.

3. Checklist before using the device:

- a. Your smartphone is connected to a 2.4GHz WiFi network.
- b. Double check the correct WiFi password is used.
- c. Your smartphone system version must be Android 4.4 + or iOS 8.0 +.
- d. Your Wi-Fi router is MAC-open.
- e. Check that the limit of devices that can connect to your specific router has not reach its limit. If so try disconnecting a device or change the router for one that can handle more devices.

4. How to set up:

1. First scan QR code with your smartphone, or search "Smart Life" app in Google Play Store or App Store to download and install the app.

2. Register the app with email address.

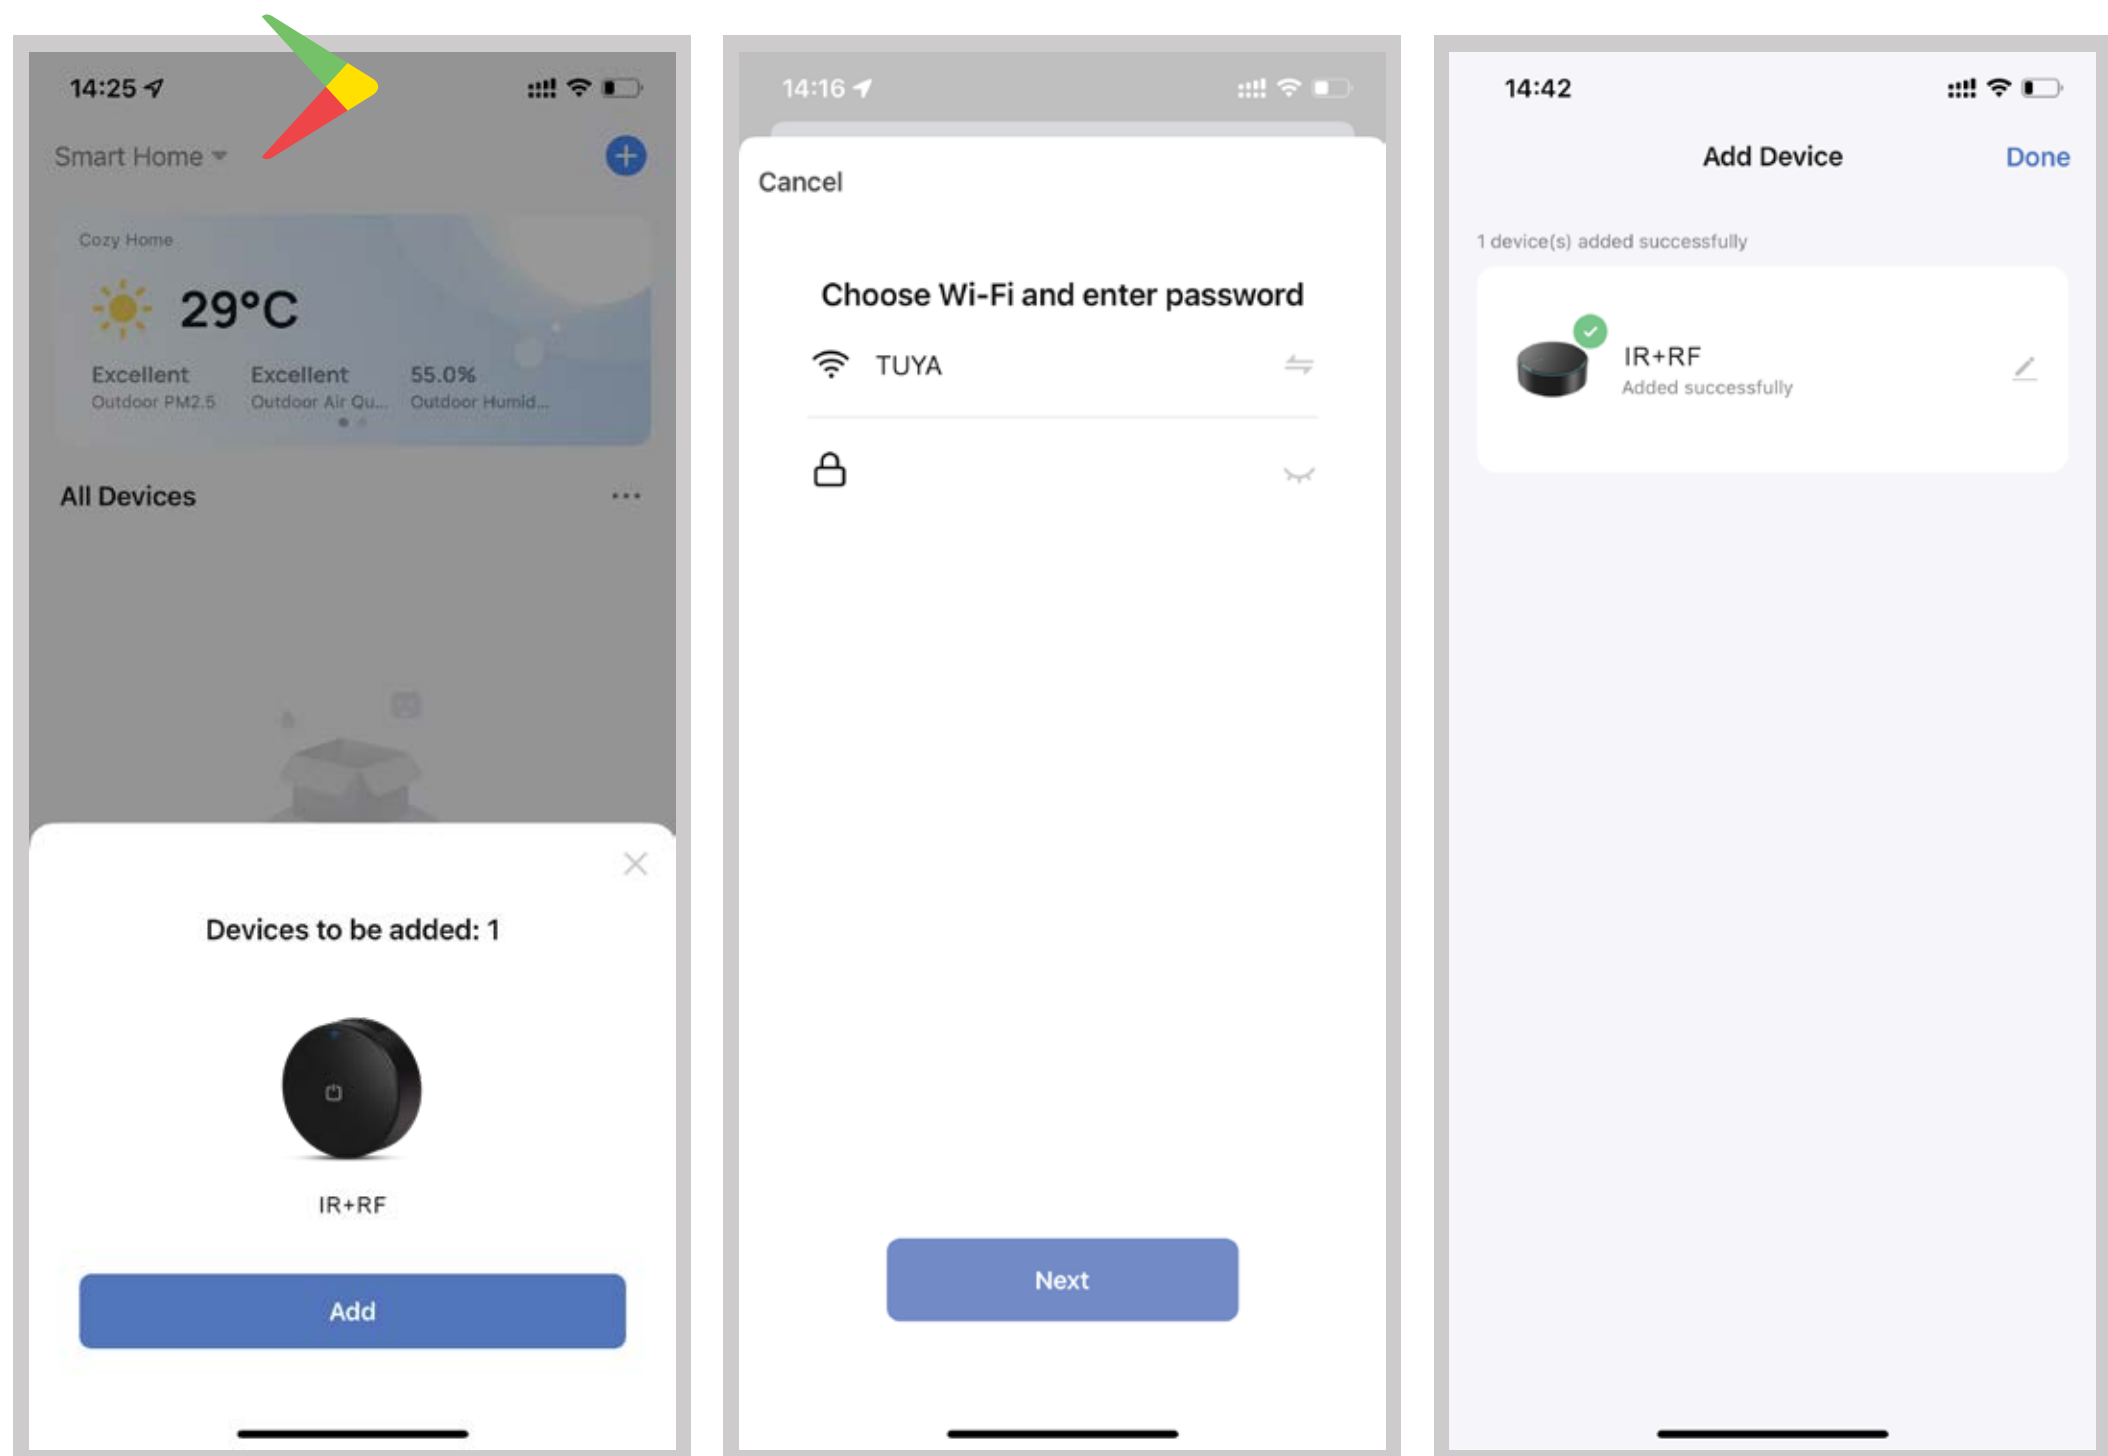

3. There are two ways for user to connect WIFI with sensor:

A. Bluetooth mode

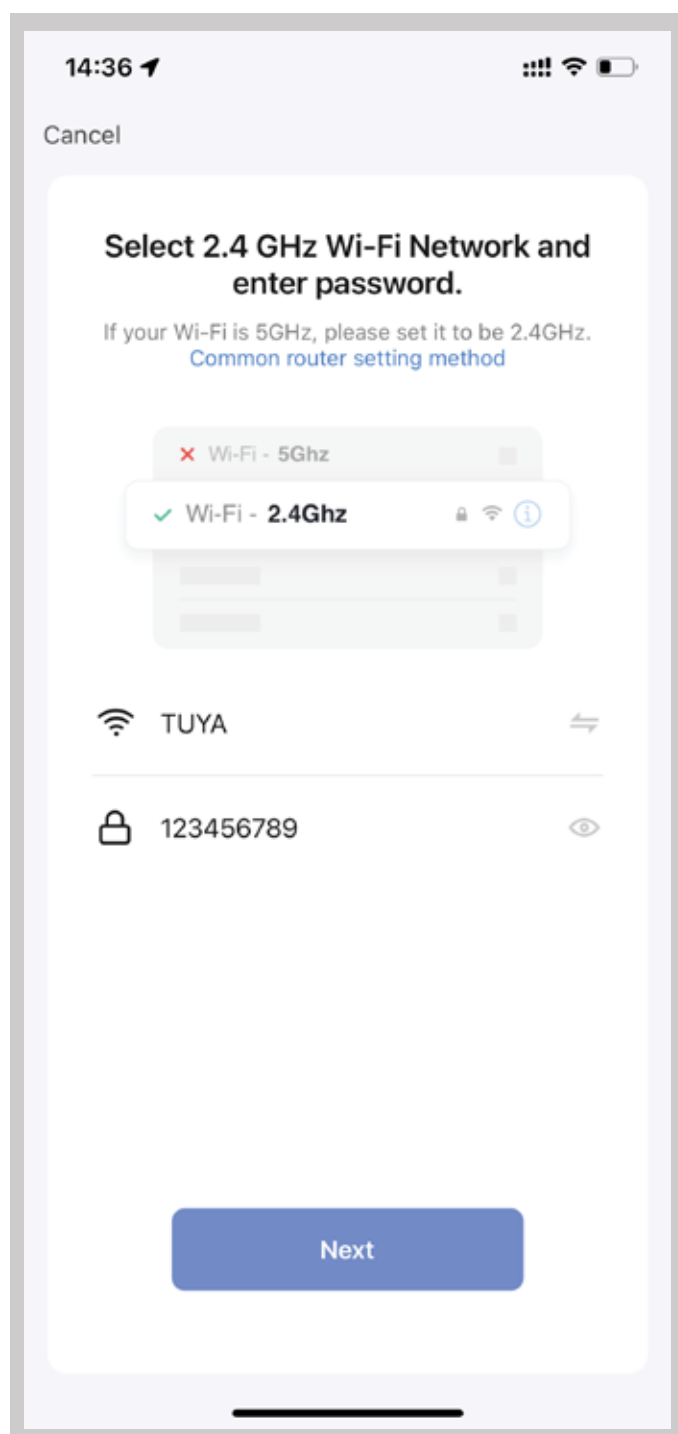

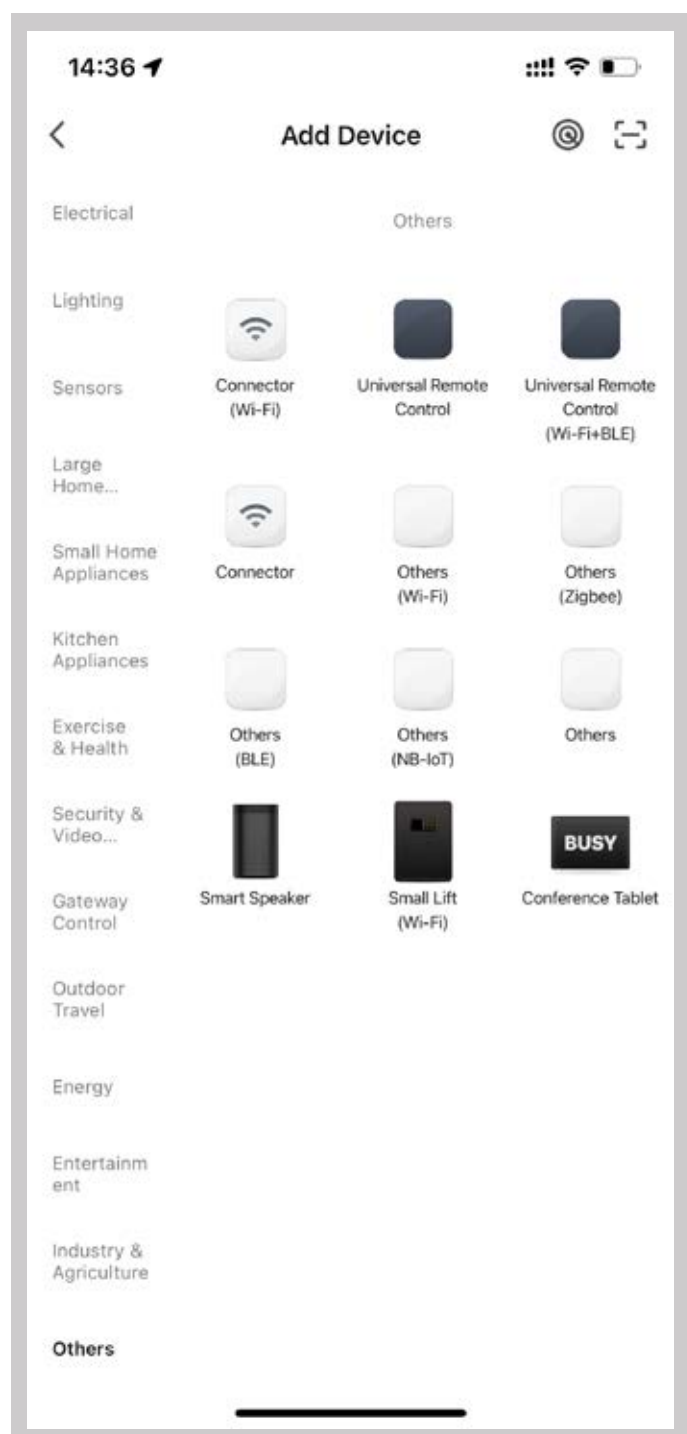

B. EZ mode

A. Bluetooth: First turn on the bluetooth in your mobile phone→press and hold the reset button for 5s→the LED indicator will flash rapidly→open smart life app a menu will appear Devices to be added:

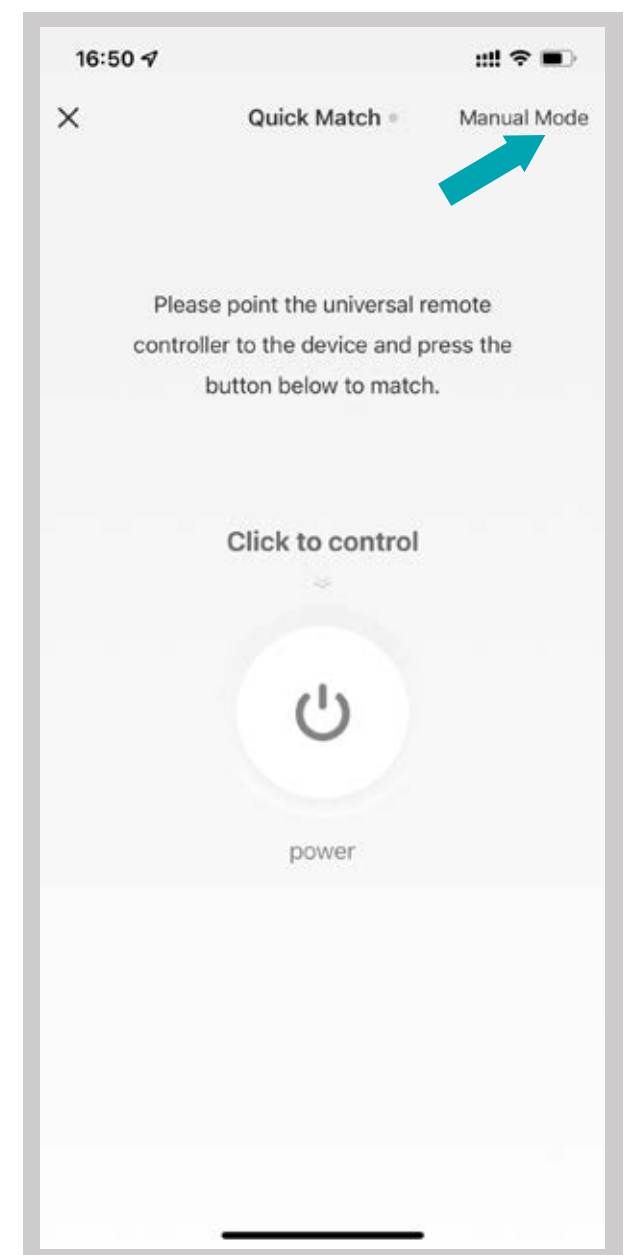

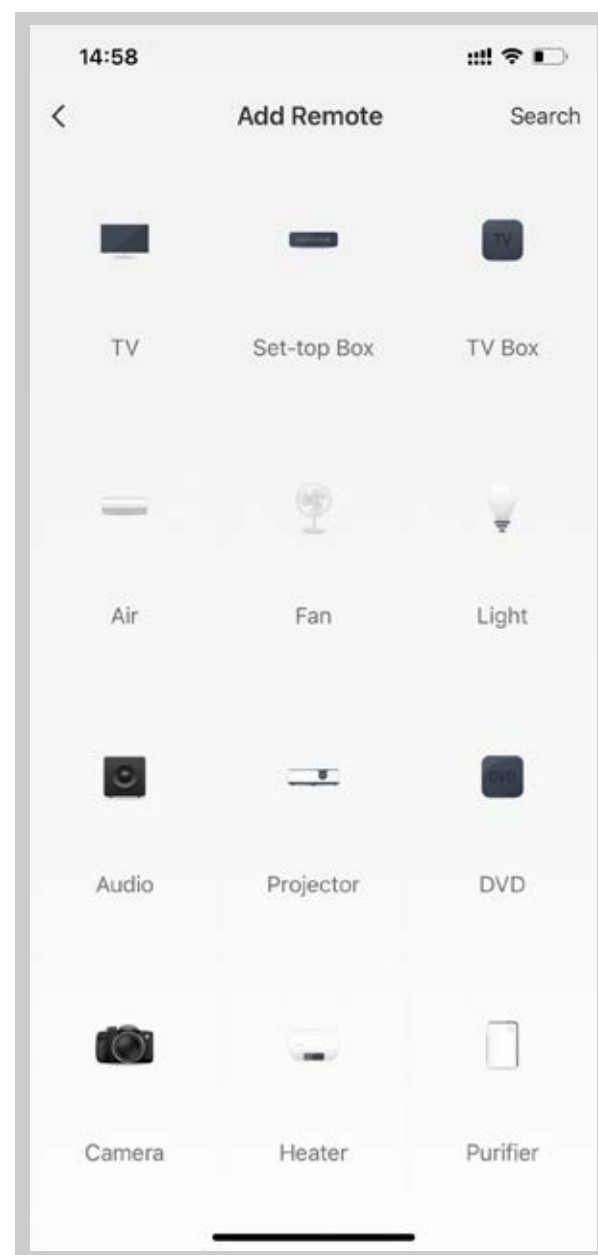

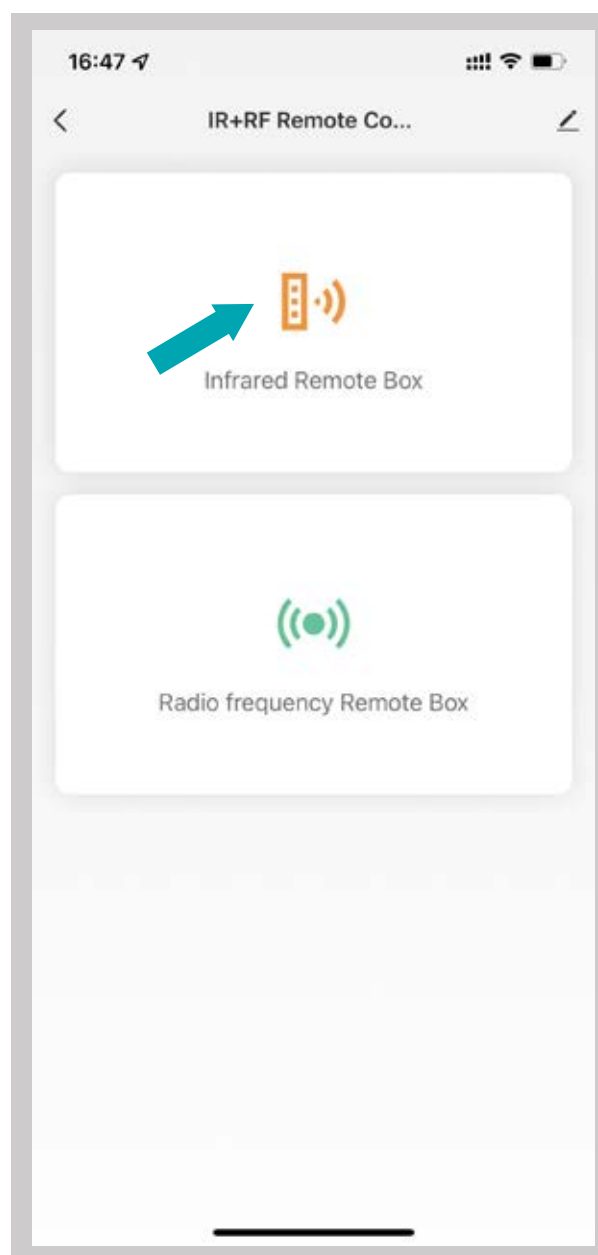

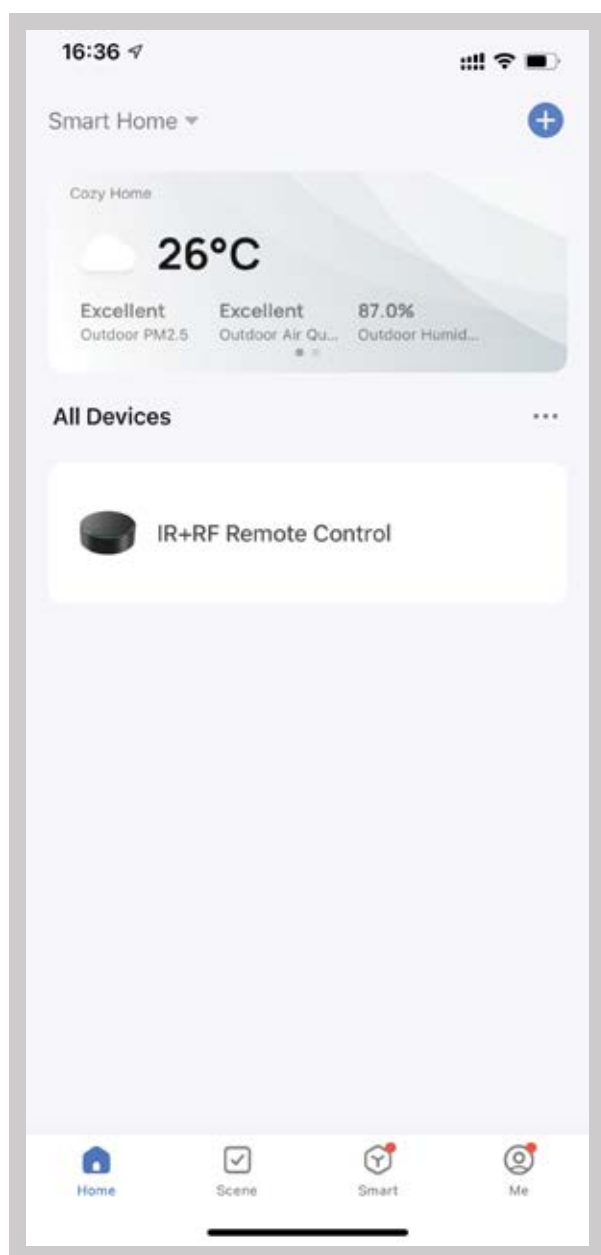

1"on mobile app. Finally press "Go to add", enter your Wi-Fi name and Wi-Fi password to complete the connection. (Wi-Fi has to be 2.4GHz)

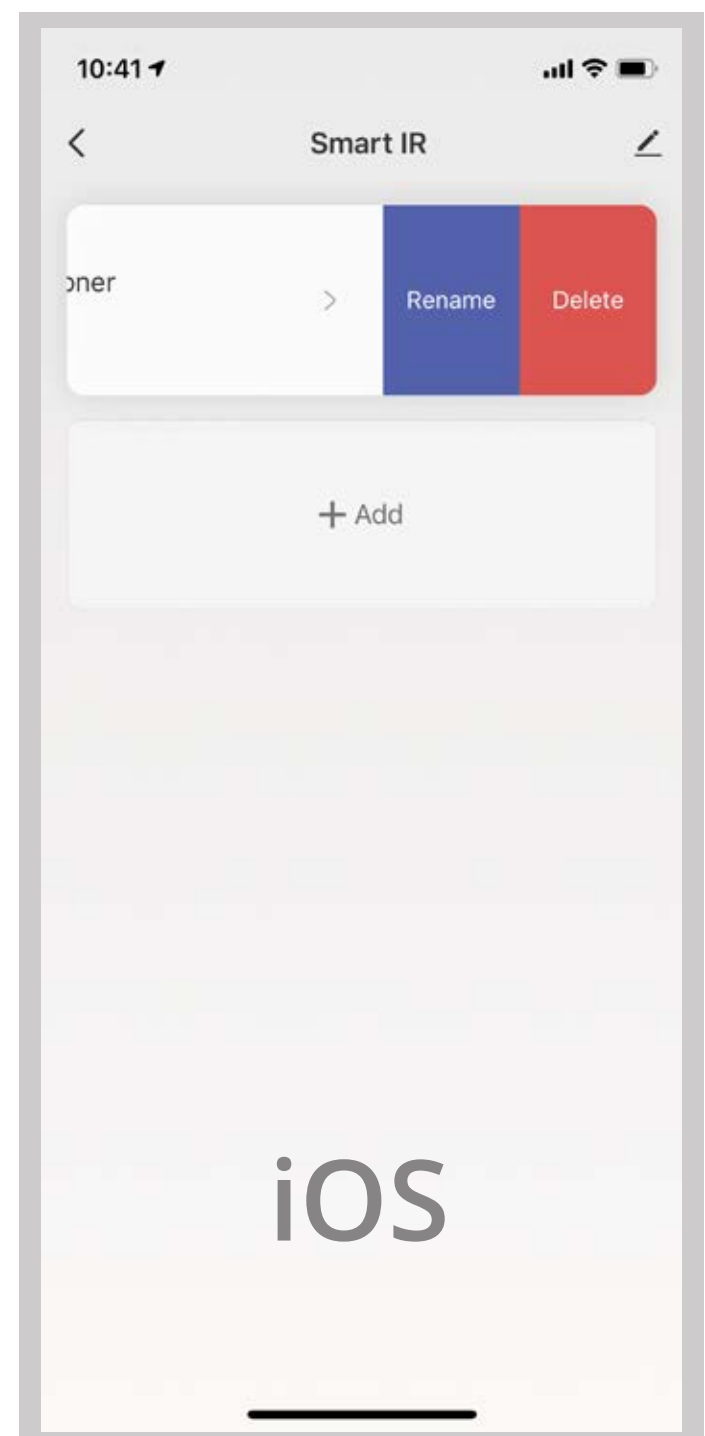

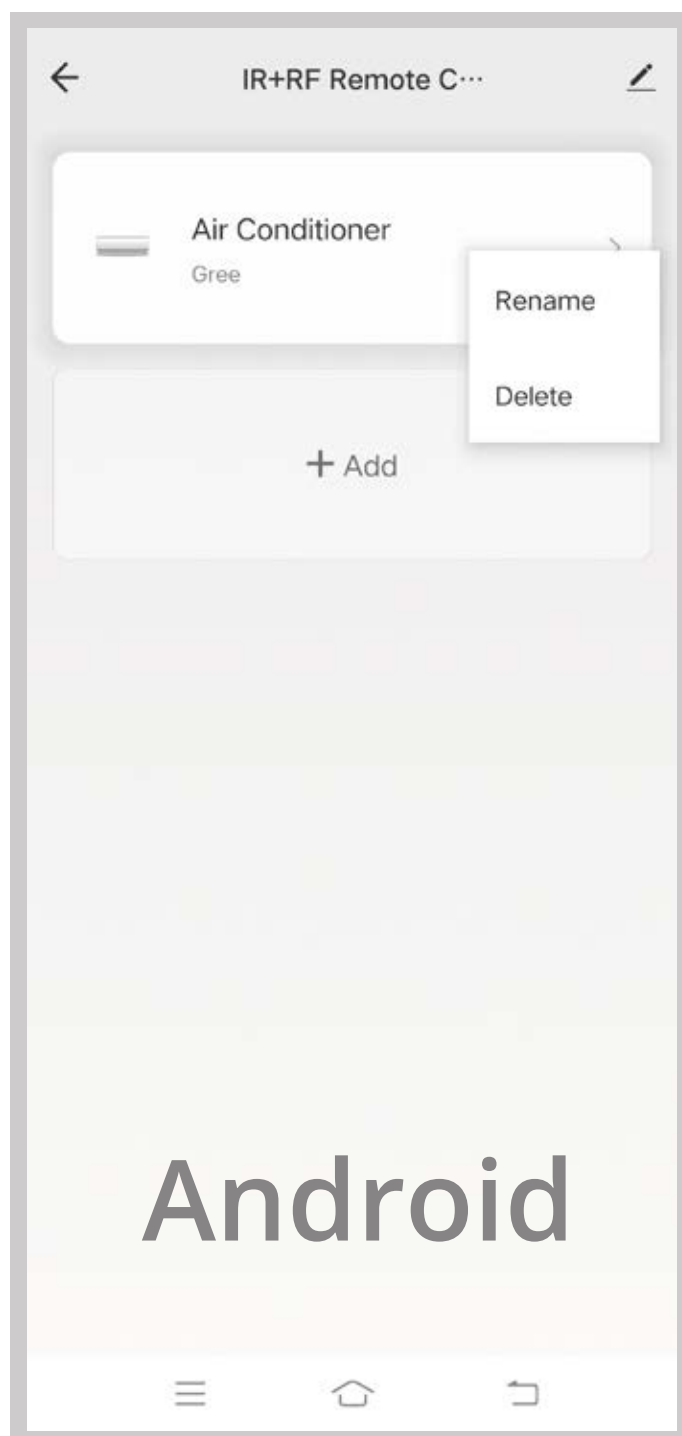

B.EZ Mode: Press and hold the reset button for 5s, the LED indicator will flash rapidly, then click "Home" "+" on the app interface or click "Add Device". Select Others→Universal Remote Control→Wi-Fi password, then make sure the LED indicator is blinking rapidly, if not, please hold the reset button for about 5s till indicator blink rapidly. It will connect automatically.

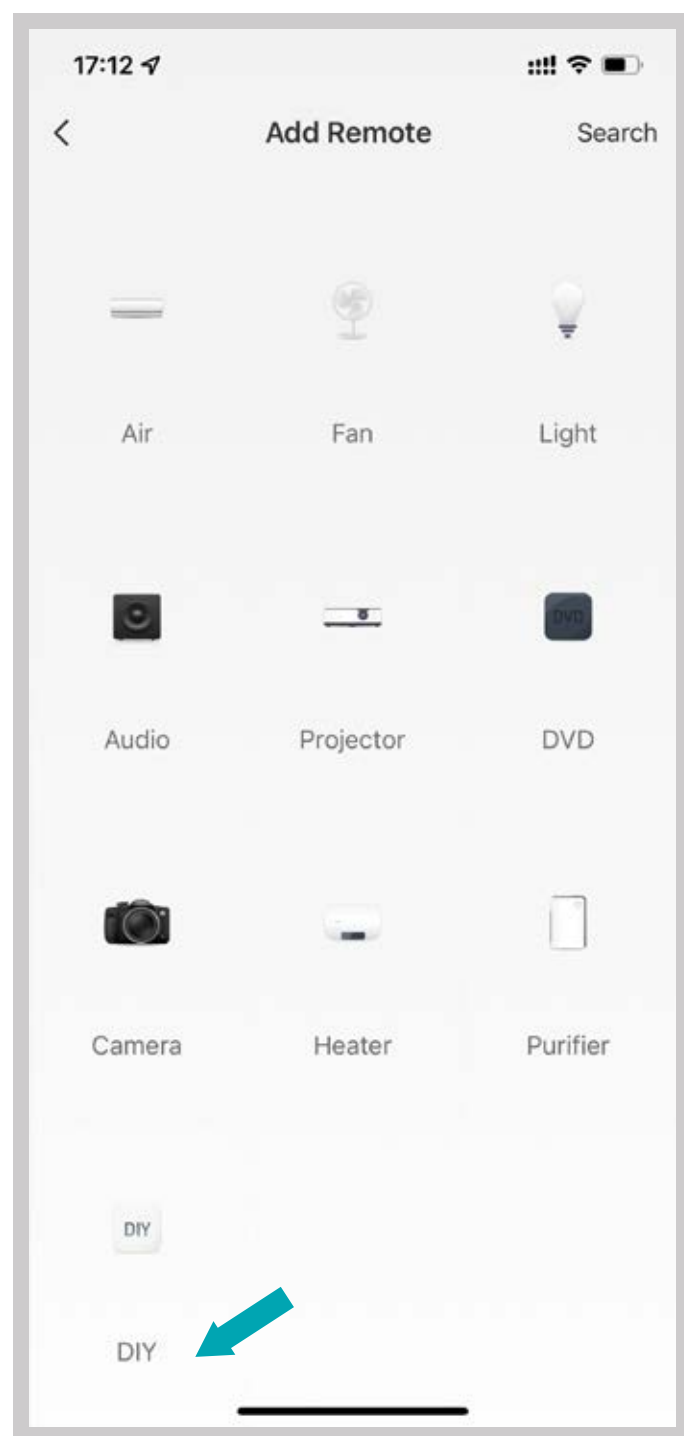

3. Tap “ IR+RF Remote Control”, click“Infrared Remote Box”, select the IRdevice select related appliance→Quick Match→choosethe brand you that need to control→Manual Mode→to match atleast 3 buttons of such appliance inapp to check if the device reactsproperly, you can control it now if itmatches correctly.

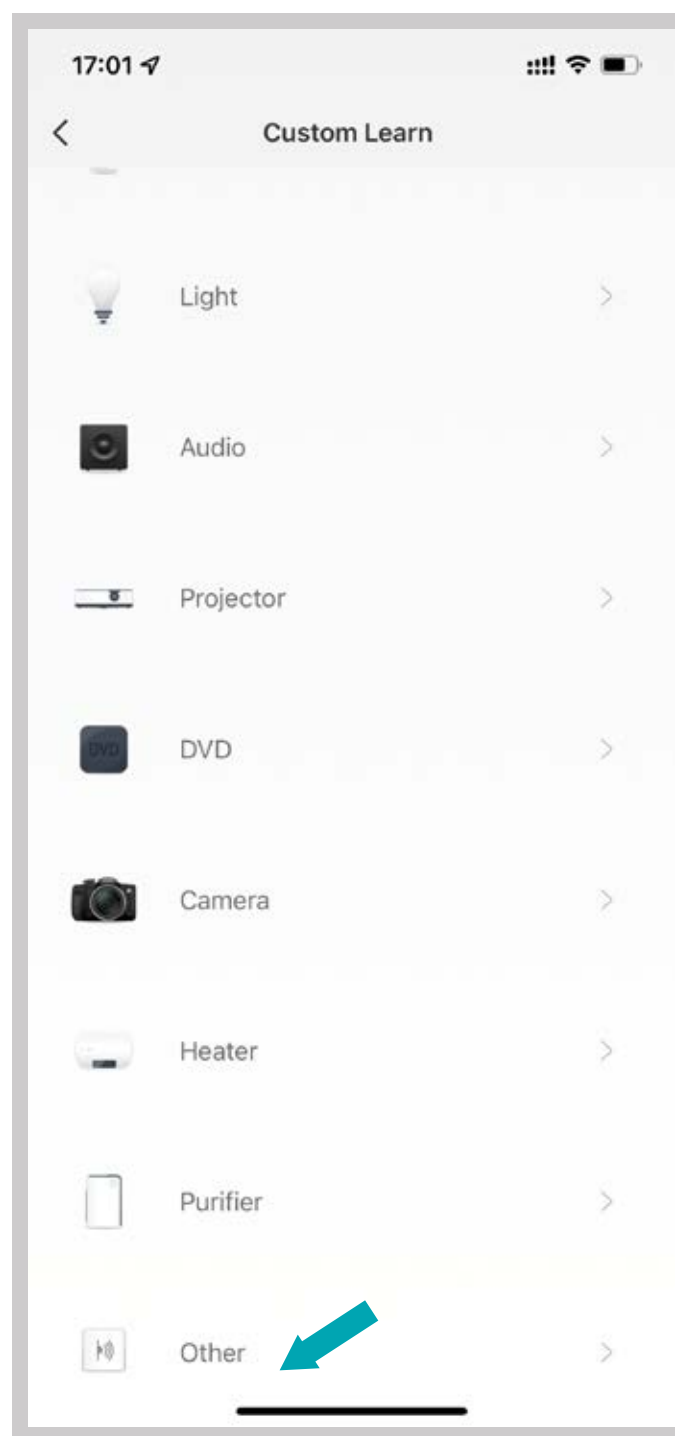

4. After adding the device, if you want to edit the name, For Android, press and hold the box, then click it to edit. For iOS, slide on the name to the left and select "rename".

5. If you cannot find the brand of the device in the brand list, you click "DIY" to learn the buttons of other brands' remote control, so you can also control the device.

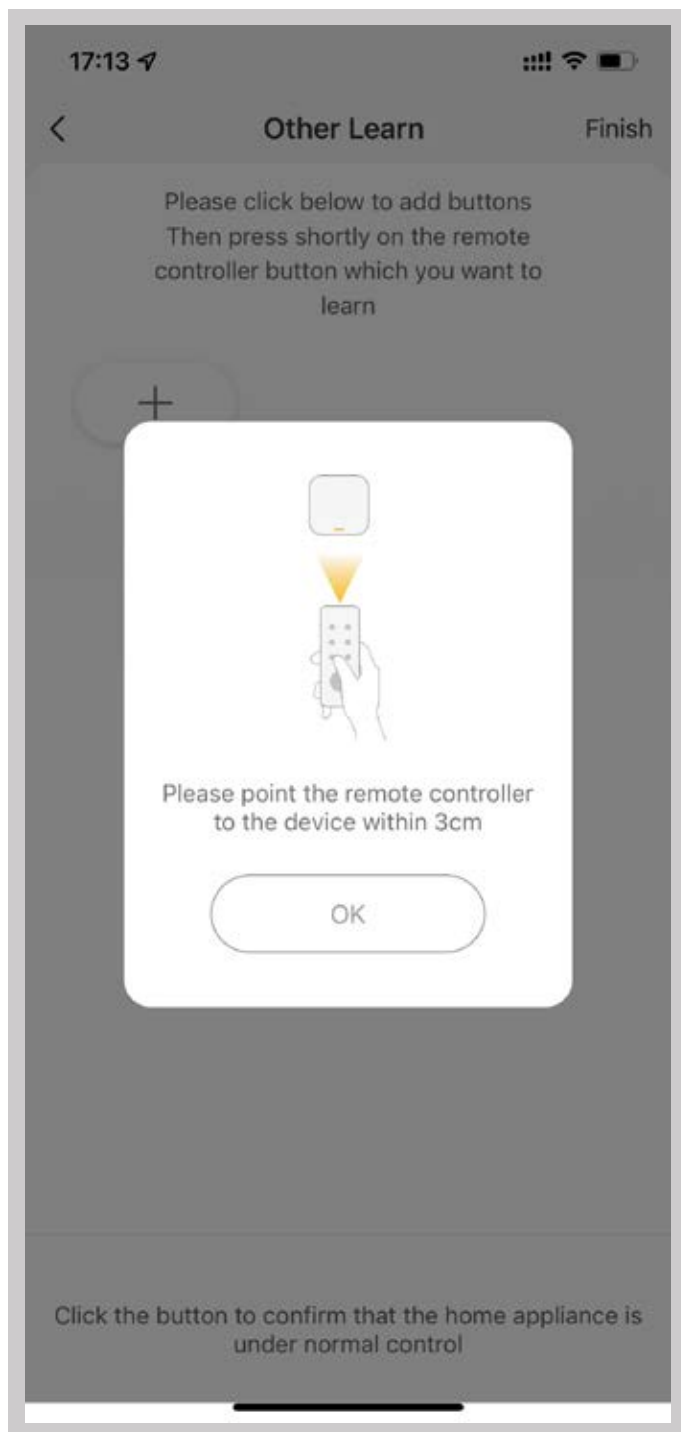

Step 1

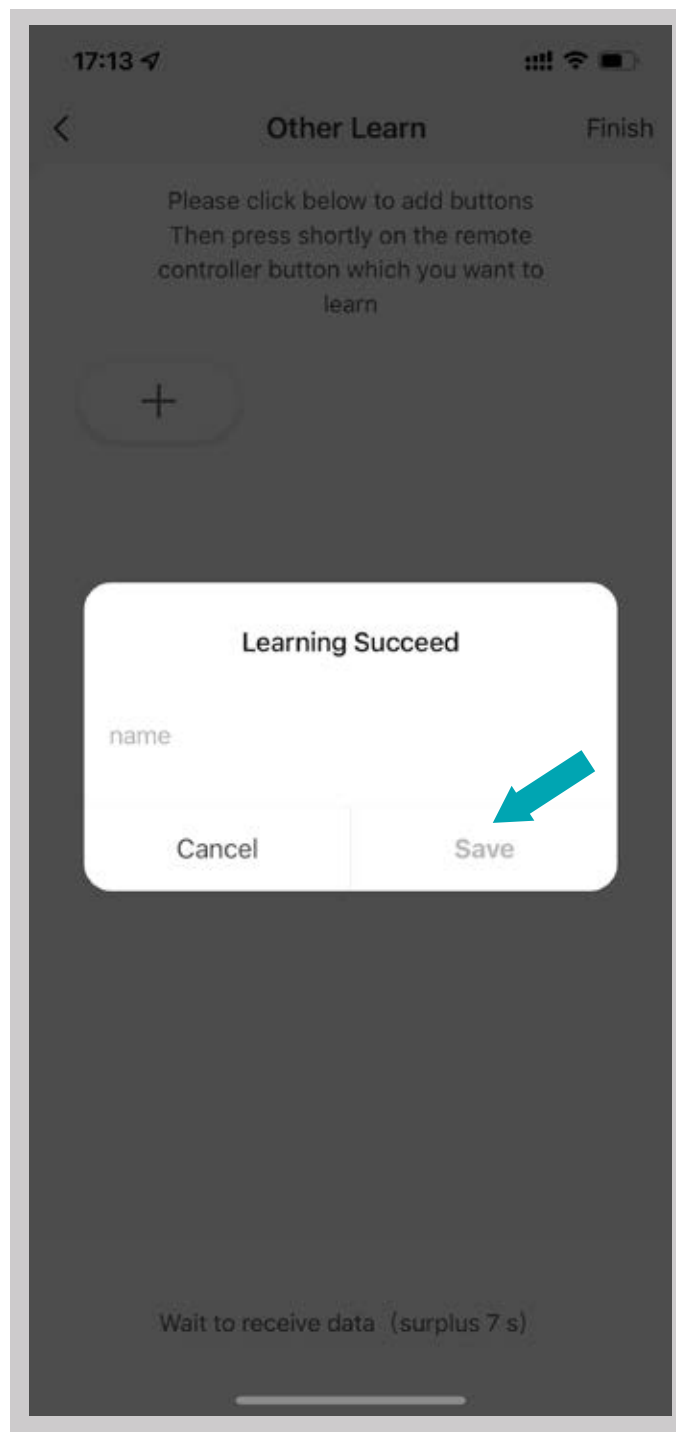

Step 2

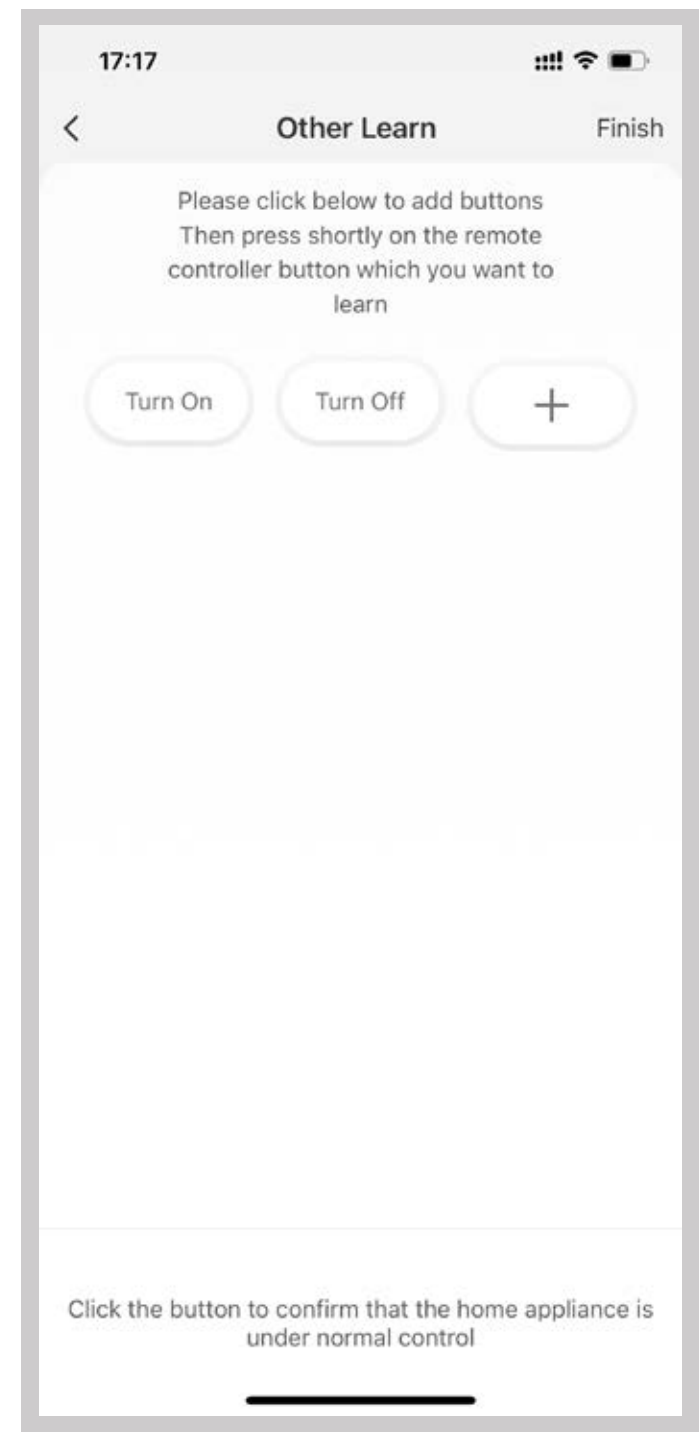

Step 3

Step 4

Step 5

Step 6

6. You can click “+” to continue to copy other buttons or click “Finish”.

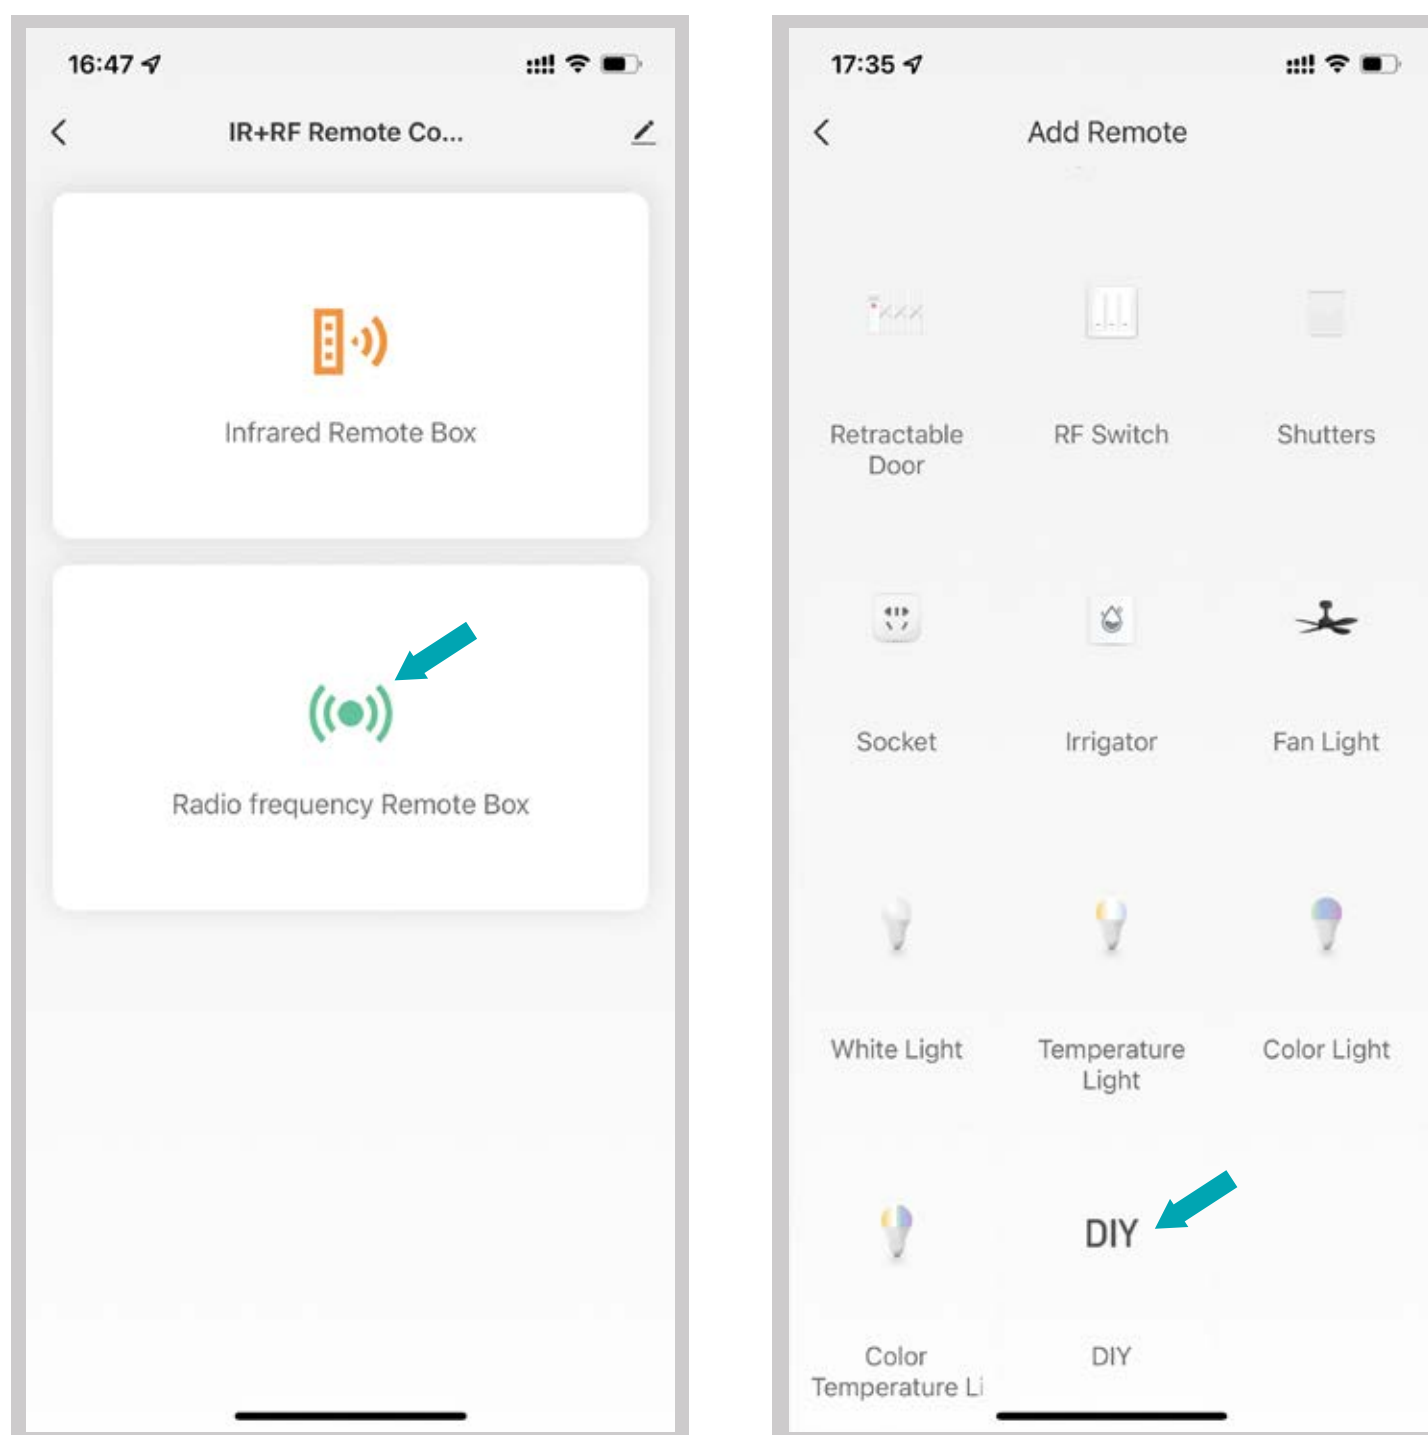

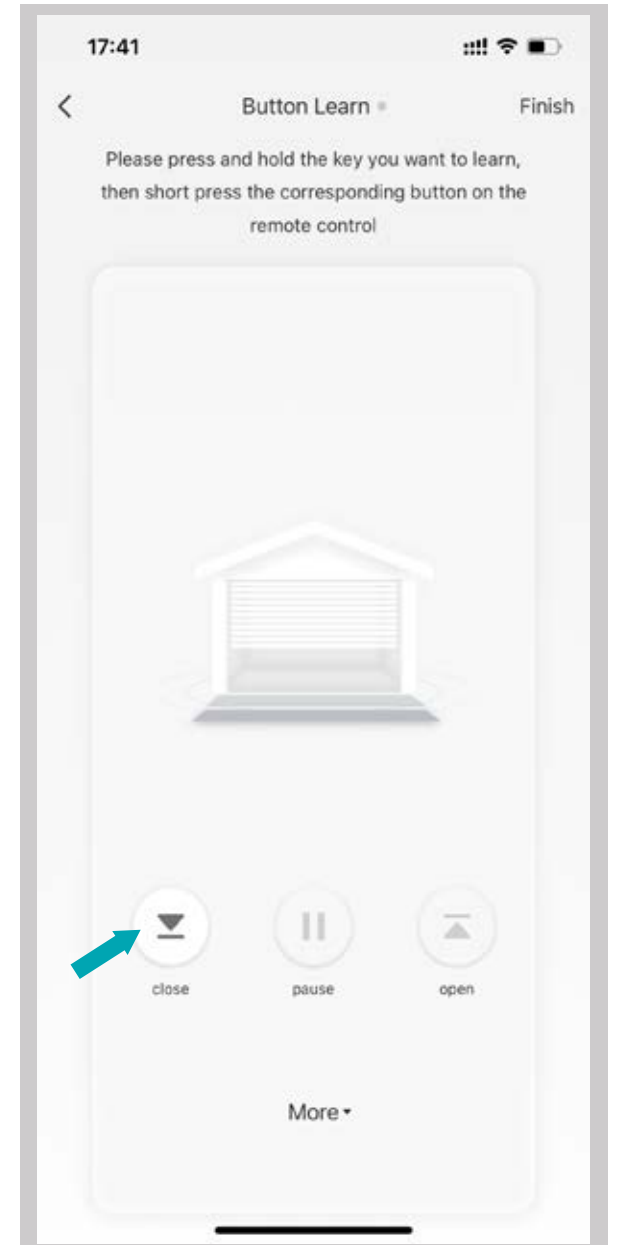

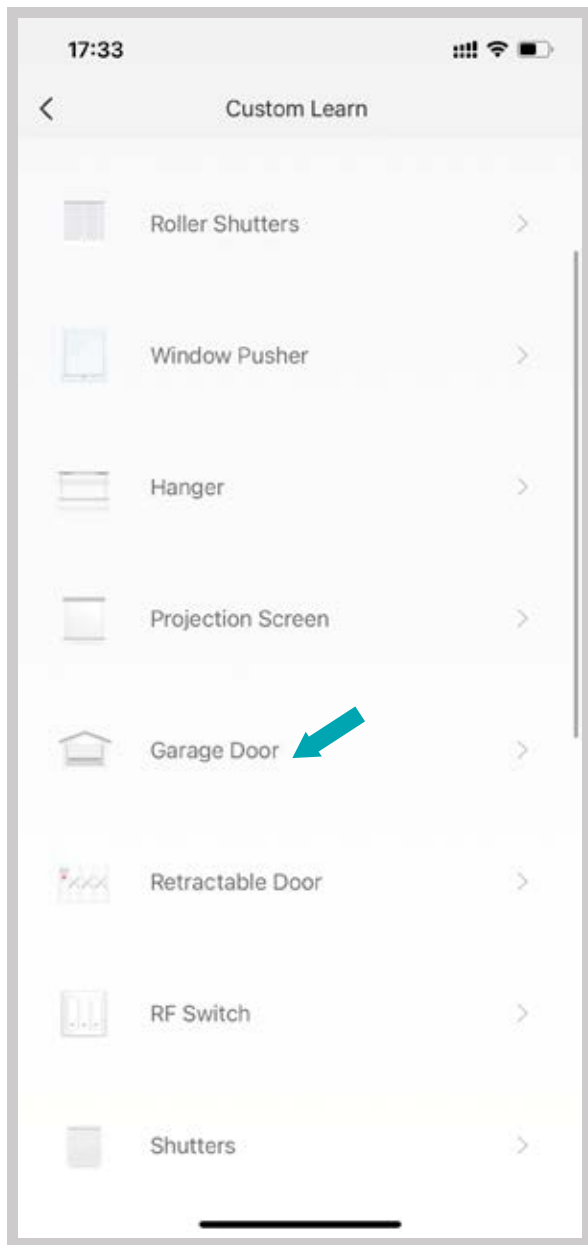

Notes:

a. It only support 38KHz frequency, if the IR remote is unable to receive commands from the IR device, then the frequency of IR device may not match, causing it to not work properly.

b. DIY does not support voice control.

7. You also can control the RF-enabled devices by DIY learning buttons of the RF device's remote control. Once the button is learned successfully, press it to check whether it works.

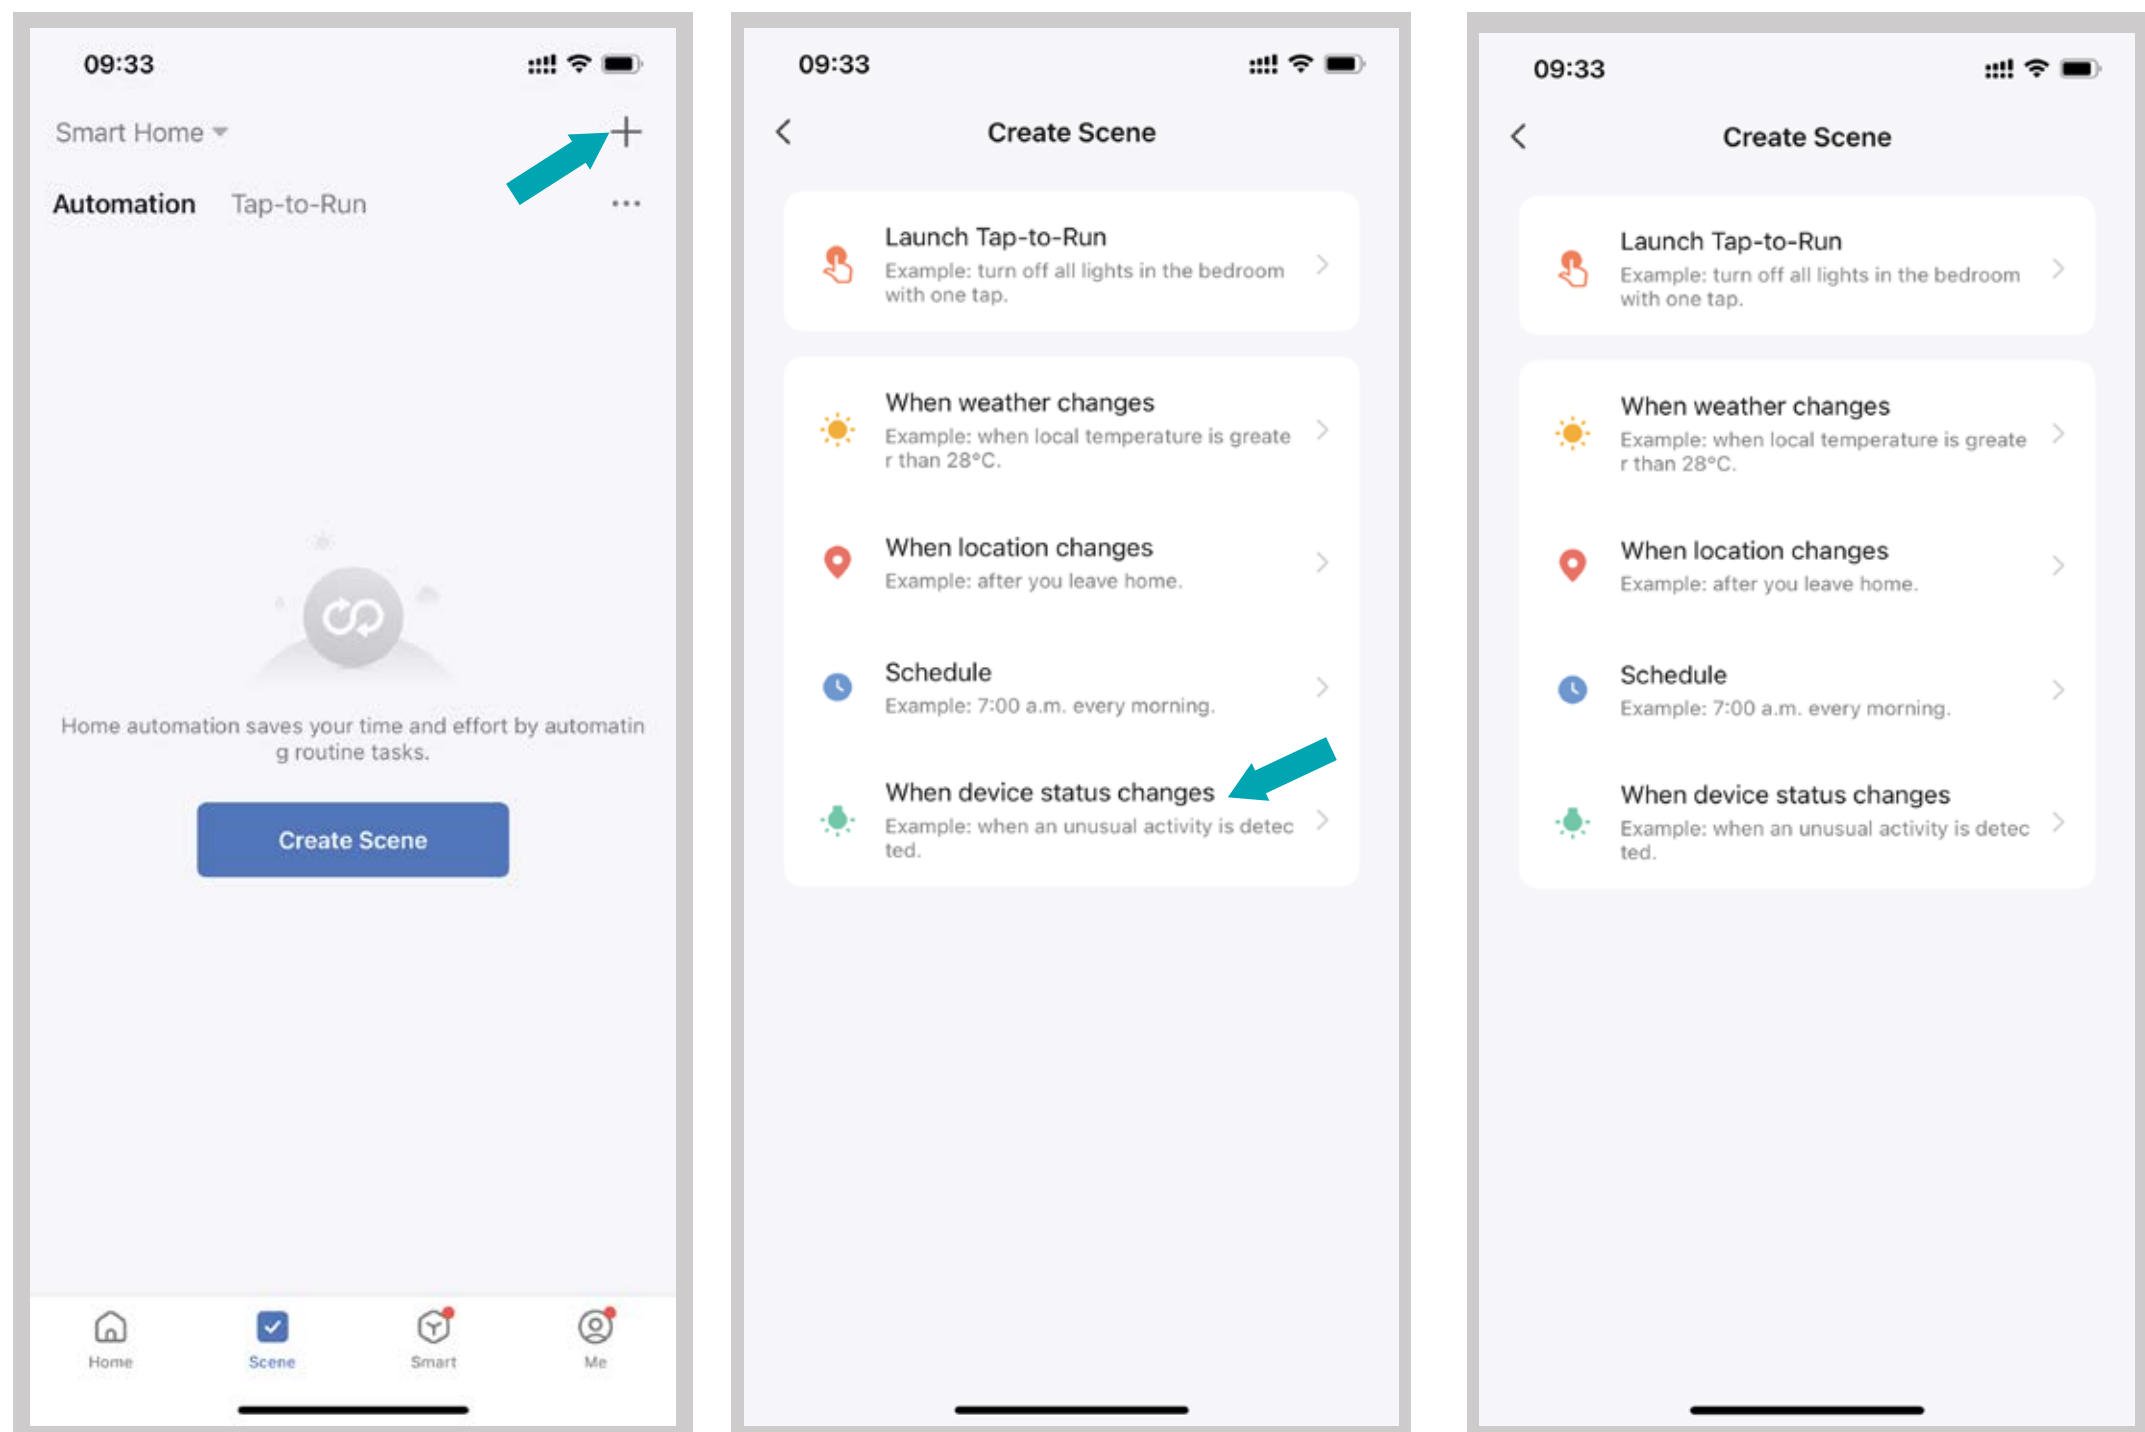

5. Functions

1. Custom Scenario

Create smart scenario for IR devices, click "Scene" page, then click "+" at the upper right corner to set conditions and tasks.

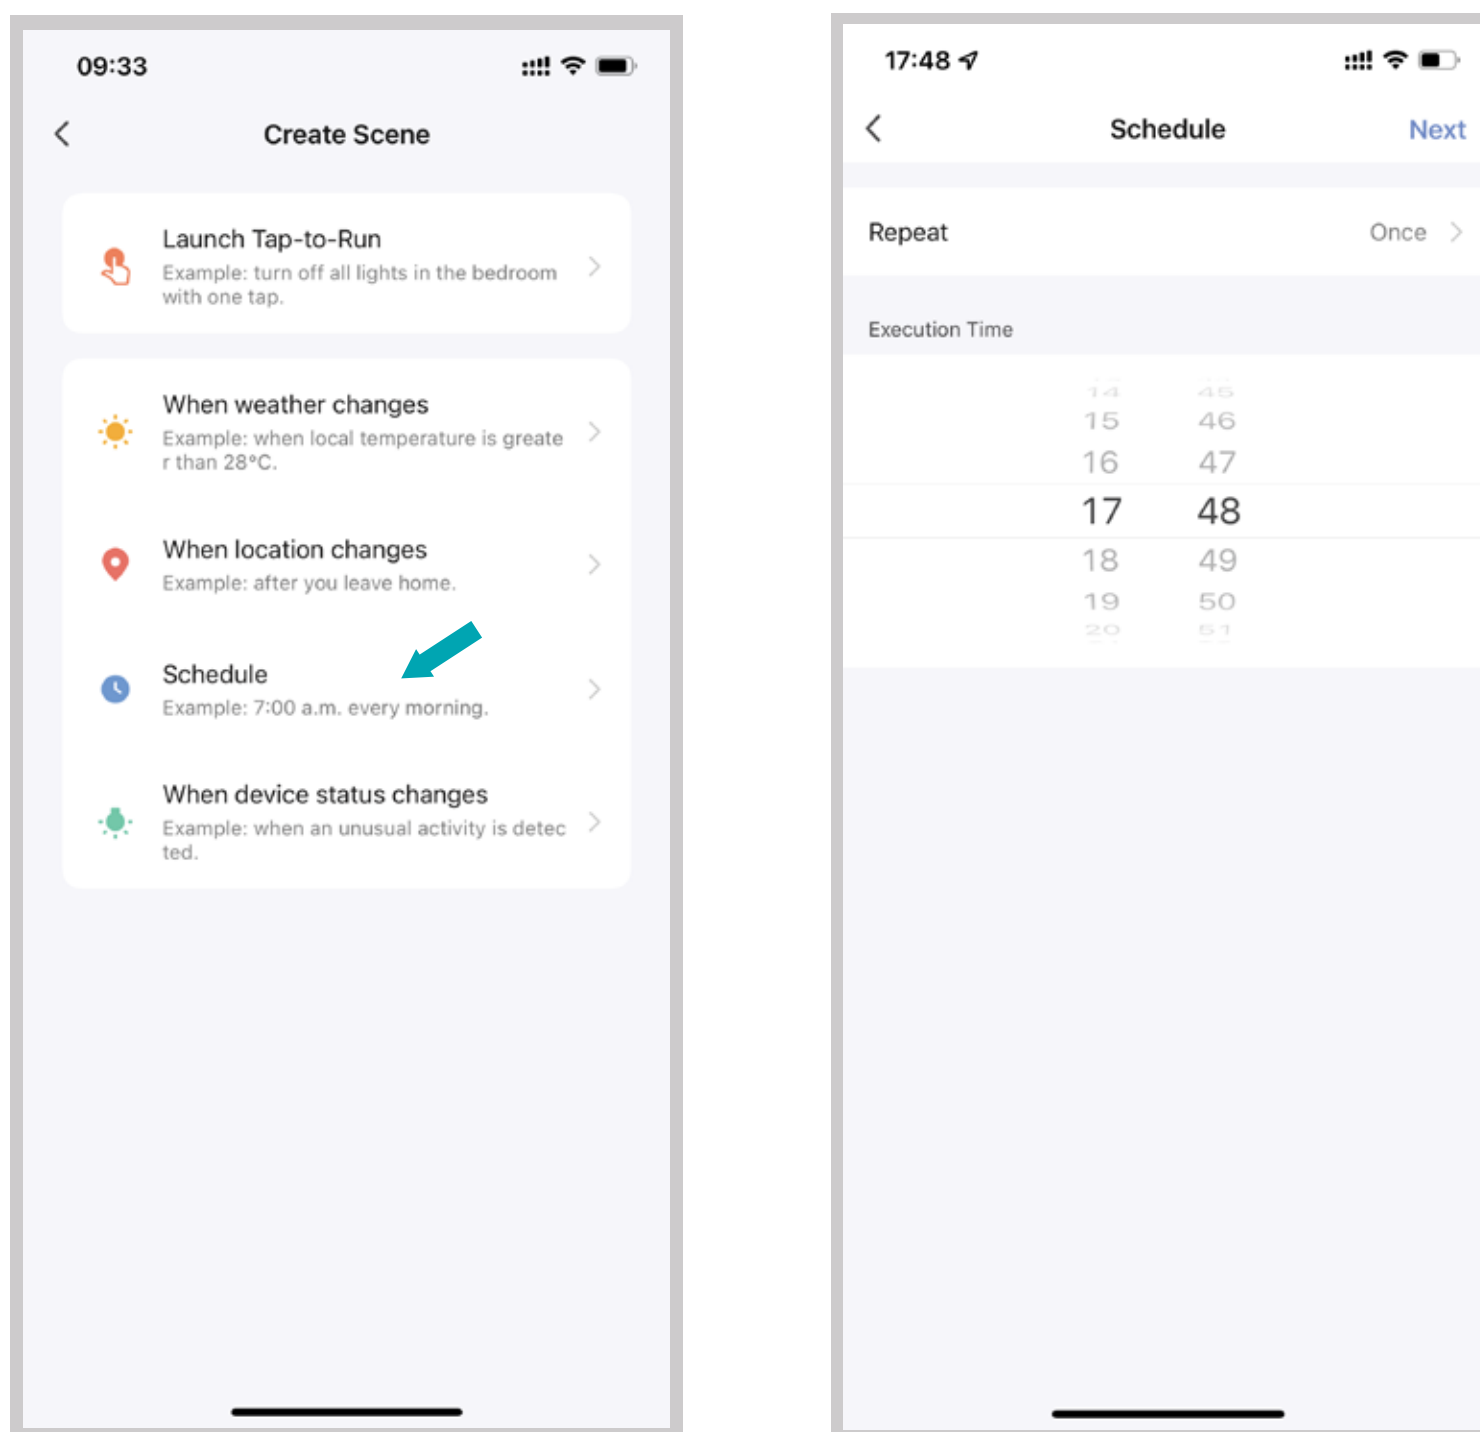

2. Remote control

You can control IR/RF devices remotely wherever you are at anytime on the mobile app.

3. Set Schedule

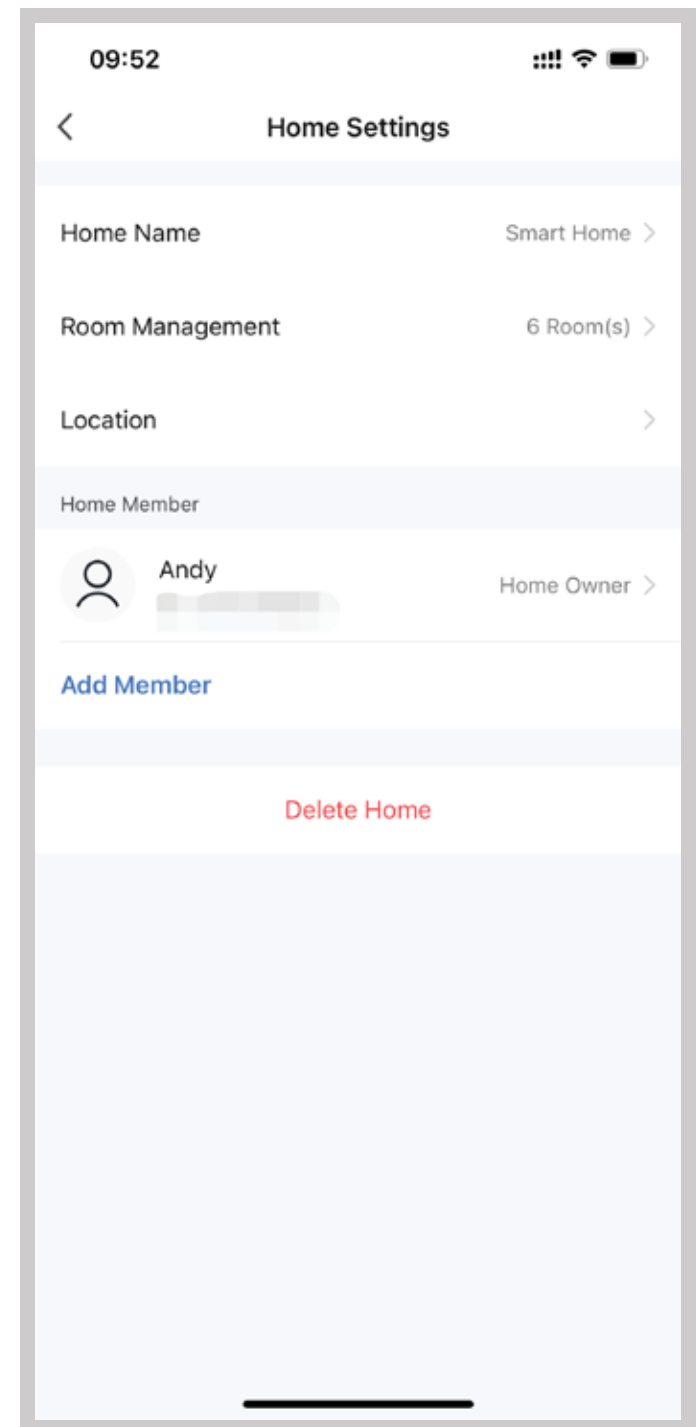

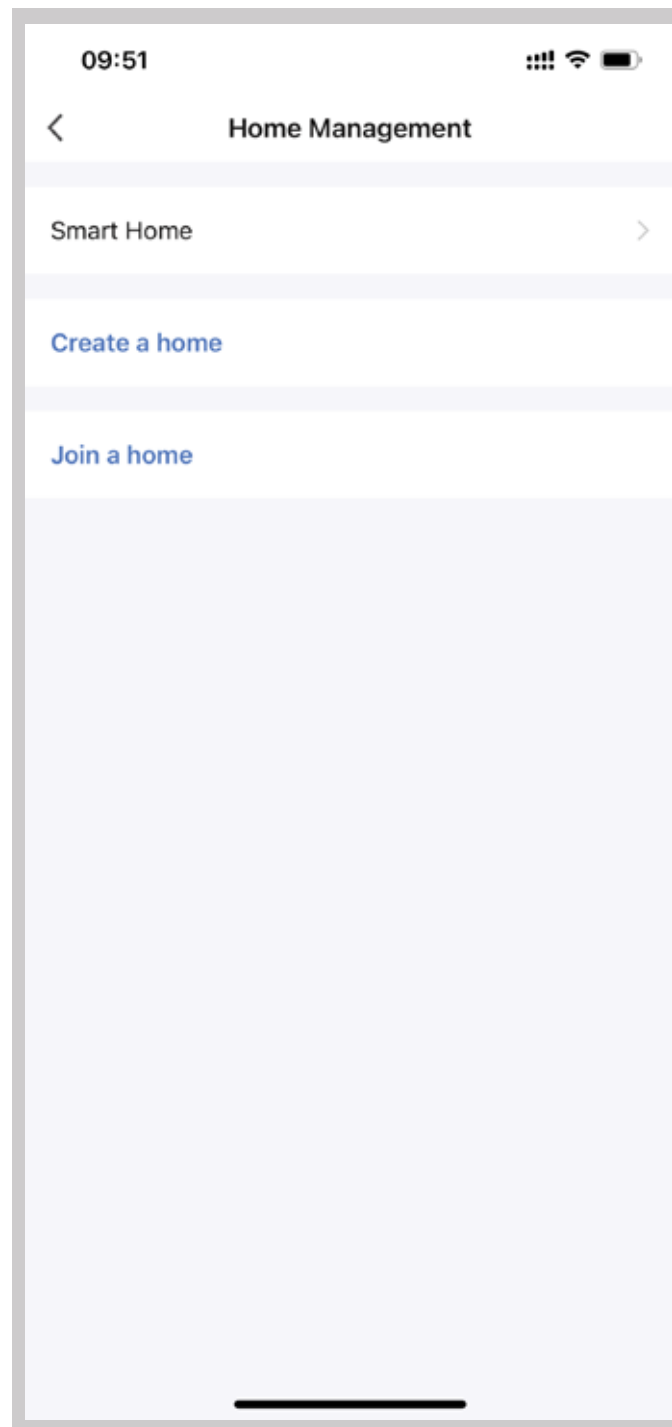

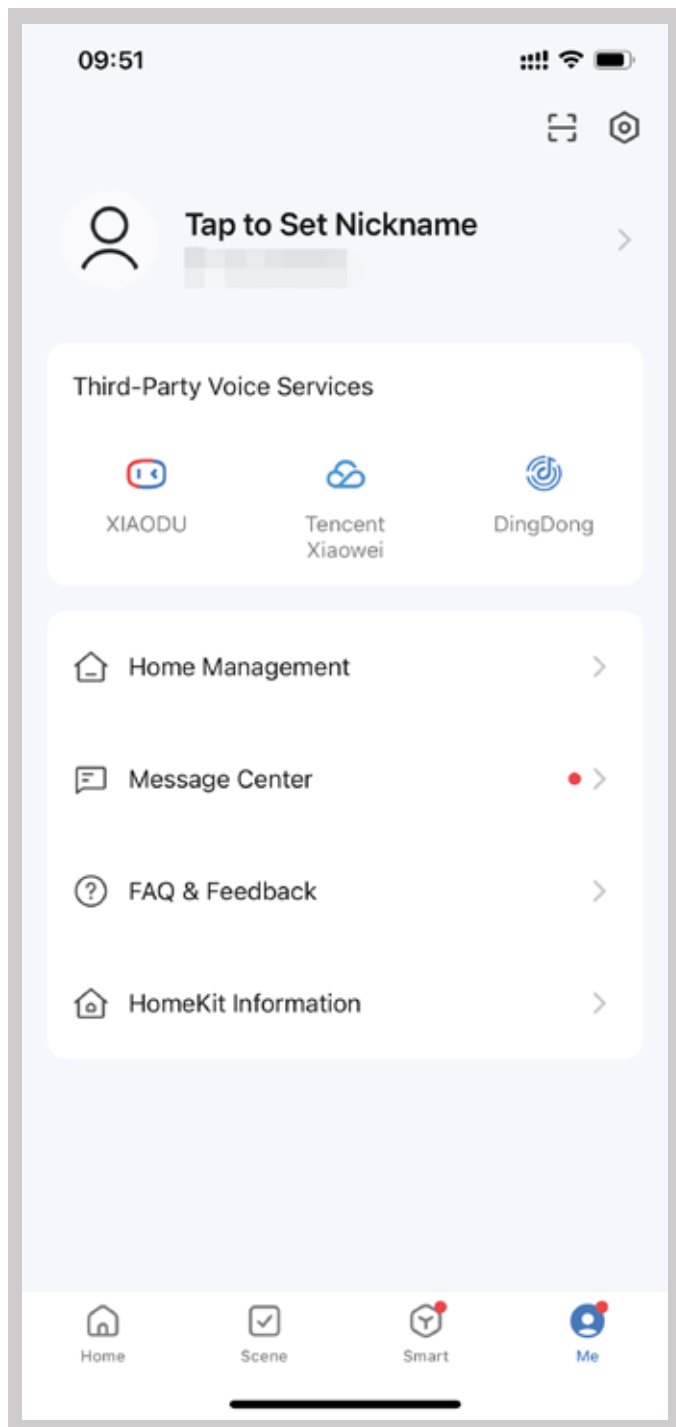

Select "Tap to Run" or "Automation" in "Smart" page, tap "+" to select "Schedule" to set power on/off.

4. Share devices

You can share added devices with your family members, so they can also control the devices.

5. Third-party Voice Control

Works with amazon alexa and google assistant.

6. Tips

1. If the device is not connecting to the WiFi check:

- 1) The Universal IR/RF remote is powered on.
- 2) The WiFi connection is 2.4GHz and not 5GHz
- 3) There's network connectivity, check it by browsing the web.
- 4) The typed Wi-Fi password on the app was correct.

2. Installation Precautions.

IR can not penetrate walls, so make sure there is no obstacle between IR remote and the IR devices.

3. Reasons why the device is offline

- 1) Router is powered off or without internet.
- 2) The WiFi router was replaced and or WiFi password has been changed.
- 3) Poor WiFi quality (signal strength or speed)
- 4) Device is too far away from the router causing intermittent connection.
- 5) Check if the router is overloaded due to high amount of devices connect at the same time. The device may go offline after a certain period but will come back on to normal after restarting the router.

If this problem persists a change to a more powerful router may be needed (One that can handle more devices at once).

To check if it is a router problem you can use your phone's hotspot to mimic the WiFi network (same name and password).

If the device remains connected and works normally the router may be the issue.
